

Ovit

Innovating Security

| **PHYSICAL** Security Services

Ovit is strictly a security oriented company. We protect customers by offering a holistic security approach. Ovit is unique in that it operates both in the physical and cyber security domain.

By unifying these seemingly different worlds, we offer a completely new product consisting of sophisticated services, deeper knowledge and high expertise.

Thus, we provide significant added value to this unique Industry that is usually fragmented and often operates at low standards.

When a client starts to cooperate with Ovit, a series of procedures are implemented to its facilities and infrastructures, with the scope of minimizing the risk exposure and enhancing the quality of life, with minimum disruption. Ovit's

accredited staff, will define what would constitute a model secure facility or IT infrastructure for the client and apply the appropriate measures and tactics in order to realize it. The model will identify client's core functions, critical assets, the threats and vulnerabilities that may be exploited, and it will state the appropriate measures to mitigate them.

We follow specific and ISO 27001 certified, risk assessment guidelines & management methodologies for protecting buildings and infrastructures. The personnel responsible for executing these procedures consists of experienced, former military officers that have executed similar projects for numerous military and commercial facilities; the Hellenic National Defence General Staff and the European Space Agency, being among them.

Cert No 11433

PHYSICAL Security Services

We offer a broad range of services that enable clients to reach their business objectives, through a unique security approach.

- Guarding Services
- Security Consulting
- Corporate Security Training
- Physical Security Risk Assessment
- Intrusion Scenarios & Security Evaluation
- Physical Security Technologies Implementation

At Ovit, we prove our expertise. Before undertaking any project, we execute procedures such as:

- Vulnerability Assessment
- Threat Analysis
- Facility Characterization
- Threat Impact & Consequence Analysis
- Security System Effectiveness Assessments
- Risk Estimations & Risk Reduction Strategies

THREAT ANALYSIS - RISK ASSESSMENT

The next step involves draft, and providing a series of plans & proceduring, tailored to the facility's risk exposure & the client's specific needs, according to risk assessment's & threat analysis findings.

- Security Master Plan Drafting
- Job Descriptions
- Emergency Response Plans-Procedures

SECURITY PLANNING - SECURITY POLICY CREATION

With the completion of the planning stage, implementation starts. Our core procedures, in order to improve security personnel competitiveness and wellbeing include:

- OPQ tests from licensed SHL assessors
- Background personnel checks
- Rotational assignments
- Performance Appraisals
- Perks
- Teambuilding activities
- Job Description & Continuous training
- Physical condition tests

SECURITY POLICY ENFORCEMENT / IMPLEMENTATION - EVALUATION

As a final step a series of technologies are implemented in order to monitor and improve the level of security with Next Gen Patrol Management & Live Reporting System, ISO 9001 & ISO 27001 certified. We implement cutting edge technology in order to monitor, control and, if necessary, remediate security on-the-job. Our solutions provide the ability to interact with the security personnel even from a smartphone, through a 24/7 web based, interactive channel. They include:

- Live-time, Video & Audio file transferring
- Patrol, timetable and route, configuration via checkpoint's mounting on designated spots, or geolocation.
- Alerts, if a patrol checkpoint is checked out of the designated timetable, or if the checkpoint is missed.
- GPS triangulation and patrol route mapping, displayed live on Google Maps. Signal accuracy can be reduced to less than 7-9 meters, if WiFi connection exists.
- Panic Button.
- Live Reporting, instantly available for viewing, upon completion & uploading.
- Easy access to reports history, even for a year back.
- Live employee shift monitoring, for current and upcoming shifts.

MONITOR & SECURITY MANAGEMENT - INTRUSION & DETECTION

Protecting assets is not a simple human resource management service but **the cornerstone for the proper function** of any organisation. Ovit specifies a complete set of procedures & functions that correspond to each client's basic needs for security.

PHYSICAL Security Services

CHECKPOINT TOUR SYSTEM

Our Tour System is an innovative upgrade to the traditional guard tour checkpoint system. The system uses technology to improve the functional components of the traditional guard tour checkpoint system.

INCIDENT REPORTS

We use customizable and searchable activity and incident reports-Robust data collection fields such as pictures and signatures -Download or email reports instantly from the Ovit dashboard

GPS TRACKING PANEL

LOCATE GUARDS IN REAL-TIME. GPS is a vital component to creating a comprehensive guard tracking system. Ovit provides an aerial view of its entire security guard operation as well as rich documentation of each guard's location history

TIME KEEPING

At Ovit we use a a time keeping system built to provide the flexibility and functionality we need to monitor field workforces and shift records.Our field workforce to clock-in and out from a list of authorized phone devices that we select.

GUARD SCHEDULING

We use a transparent shift scheduling program which is published in real time to our clients & Greek regulatory authorities. Our Clients see in real time How much the labor works,Who, Where & When

REAL TIME ALERTS

Instant updates via our dashboard, SMS, or email - Changing Shifts or openings all transparent to our clients. We send alerts or panic incidents in real-time.

CYBER Security Services

INFORMATION SECURITY MANAGEMENT SYSTEMS (ISO 27001, COMMON CRITERIA)

OVIT APPROACH PROVIDES THE FOLLOWING ADVANTAGES:

- Gain a better understanding of potential security vulnerabilities that may be visible from the Internet and other Extranets.
- Evaluate existing security controls.
- Detect potential threats and exploitable vulnerabilities.
- Evaluate the security associated with web applications and/or Infrastructure Systems.
- Prevent financial loss through fraud (hackers, extortionists and disgruntled employees).
- Protecting the corporate image by avoiding loss of consumer confidence and business reputation.

An Information Security Management System is both a comprehensive plan and precise operational services, based on a risk management process, to protect critical applications and IT Infrastructure, ensure systems availability and data integrity, comply with external regulations and protect individual privacy.

A successful information security management system supports business and aligns with the client's mission, goals and objectives. OVIT consultants can help your organization create, establish and maintain a solid ISMS maximizing support of business functions, minimizing operational disruptions and implementing corporate strategy in the most cost-effective manner.

ETHICAL HACKING

OVIT Best Practices represent contemporary understanding in this field that includes evolving practices around Threat & Vulnerability management, emerging technical solutions and layered approaches towards Threat & Vulnerability management that entails strategic, tactical and operational perspective.

THREAT AND VULNERABILITY MANAGEMENT

OVIT APPROACH TO SECURITY AWARENESS TRAINING INCLUDES THE FOLLOWING PROCESSES:

- Plan, assess and design. Awareness programmes must be designed with the organization mission in mind. It is important that they support the business needs of the organization and be relevant to the organization's culture and IT architecture.
- Execute and manage. This process includes any activity necessary to implement an information security awareness programme.

SECURITY AWARENESS TRAINING

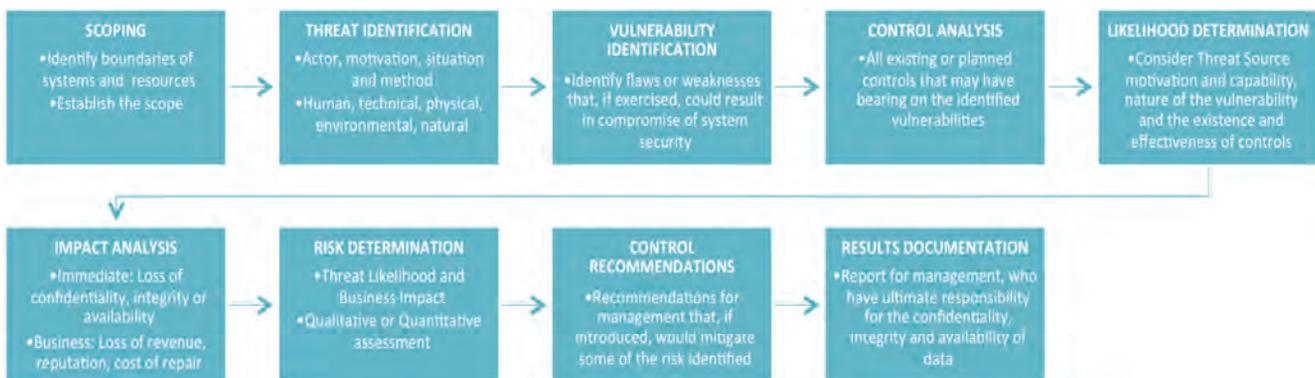

- Evaluate and adjust. Formal evaluation and feedback mechanisms are critical components of the security awareness programme.
- Once the baseline requirements have been solidified, a feedback strategy will be designed and implemented.

OVIT Security Risk assessment services focus on assessing and quantifying the exposure to events that compromise the assets, operations and objectives of your company. Security Risk Assessment is a process for defining and analysing the dangers posed by potential natural and human-caused adverse events. A successful Security Risk Assessment approach can prevent breaches, reduce the impact of realized breaches and effectively gauge and communicate monetary impact to related risks. OVIT consultants can help your organization identify risks maximizing support of business functions, minimizing operational disruptions in the most cost-effective manner.

SECURITY RISK ASSESSMENTS
